

## COMPENG 2SH4 Project – Statement of Contribution

Your Group Number \_\_\_\_\_ hector #38 \_\_\_\_\_

Your Name \_\_\_\_\_ Vivian Le \_\_\_\_\_

Your Team Member's Name \_\_\_\_\_ Joud Al Mowesati \_\_\_\_\_

**You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:**

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.
  - Iteration 2b
  - Iteration 3 Features 2 & 3
  - Bonus
  
2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.
  - Iteration 0
  - Iteration 1a & b
  - Iteration 2a
  - Iteration 3 Feature 1
  - Bonus
  
3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

I had a good experience in my first collaborate software development project as I knew my partner before hand, and we were able to easily coordinate each other's task. As expected, the hardest part of the project was building off of someone else's code and trying to understand what their goal was with every line, but in the end, it turned out well. For debugging, the use of Github to collaborate with working on code was helpful because if my partner or I had an issue we could simply push our code for the other to help. Overall, this was a good learning experience for future group coding.
